EVERPOWER RENEWABLES BREAKS GROUND ON HIGHLAND WIND PROJECT
62.5 MW WIND FARM WILL HELP CREATE PA JOBS AND MAKE TAX PAYMENTS THAT WILL
BENEFIT THE COUNTY, TOWNSHIP AND AREA SCHOOLS

NEW YORK – EverPower Renewables Corp., a developer of utility-grade wind power projects, recently broke ground on the Highland Wind Project in Southwestern Pennsylvania. Secretary Kathleen A. McGinty from the Pennsylvania Department of Environmental Protection, Representative Gary Haluska, Senator Bill Wozniak, Bill Smith, president of the Adams Township Board of Supervisors and representatives from EverPower Renewables provided comments on the project and how wind power will bring economic, environmental and political benefits to the residents of Adams Township and Cambria County.

“Years ago, the indigenous coal resources from this site helped to power Pennsylvania and the nation,” said Kathleen A. McGinty, secretary of the Pennsylvania Department of Environmental Protection. “Soon, we’ll use another indigenous resource on this site to meet our energy needs – clean, renewable wind.

The Highland Wind Project, located largely on a reclaimed strip-mine, will be 62.5 megawatts and include 25 Nordex N90 turbines. Electronic transmission passes through the site and will provide a convenient point of interconnection. The project is expected to be online later this year and could produce more than 164,000 megawatt hours of power annually. And, because wind power is free of emissions, the project will prevent 400 million pounds of carbon dioxide – a potent greenhouse gas that contributes to climate – from reaching the atmosphere. Removing that amount of carbon dioxide is the equivalent of taking 19,000 cars off the road annually, according to EverPower’s calculations.

“We are very excited to be investing in Adams Township through the Highland Wind Project.” said Jim Spencer, managing director of EverPower Renewables. “In addition to providing a clean, renewable source of energy to the community, we anticipate that 450 to 550 jobs will be directly and indirectly created from the construction and operation of the wind project. In addition, the township, county and area school districts will receive additional revenue each year in tax payment from the wind project.”

About EverPower Renewables

EverPower Renewables is a New York-based developer of utility grade wind projects. The company has been active in the Northeastern, Mid Atlantic and Northwest Regions of the United States and seeks to identify or acquire early state development projects where unique and promising opportunities are available.

The company, which is developing projects in seven states, was established in 2002 and the principals of EverPower have a proven track record in permitting and developing large-scale energy projects. This experience has served as the foundation for EverPower's activities in wind energy and the company has quickly amassed a large portfolio of wind projects. For more information about the Highland Wind Project visit www.Highlandwindproject.com and to learn more about EverPower Renewables visit www.EverPower.com
